🏠 Wroclaw (remote, hybrid)

I have 3 years of experience of commercial programming as back end Java developer. My main tech stack is **Java, spring, hibernate**, **postgres** and **docker**. Although I also created a couple of project using **Angular** and **AWS**. So in case of need I can adapt my tech stack for full stack and/or cloud computing.

Currently I'm creating my own brand web site which would nicely combine practical usability, my back end, front end and cloud computing knowledge.

Generally I understand the value of human relationships and I'm able to be a part of a team. In my job I often needed to work with front end and analytics teams to solve a more complex problems.

Technologies

- Java
- Spring core/REST/Data
- Hibernate
- SQL(PostrgreSQL)
- Docker
- Git
- GitHub/GitLab
- JUnit/Mockito/Postman
- TDD
- HTML/CSS/Typescript
- Angular
- CI/CD

Languages

- Polish – fluent
- English – communicative
- Ukrainian – native
- Russian – native

High school of Business in Wroclaw
Engineering degree, computer science
2020 – 2024

Experience

KLG Solutions sp. z o.o.

2021.08 – 2024.09   Back end Java Developer

Project description

Web application fro managing a large corporation. It's build using microservise architecture with REST API. Project has a complex system of creating and configuration of user's tables, columns, permissions, notifications and replacements.

My responsibilities

- Interpreting the technical aspects of the code to gain insights and effectively communicate its implications to higher management for informed decision-making
- Rapidly resolved a critical issue while ensuring high-quality, maintainable code and thorough testing for long-term stability
- Developed and integrated new functionality to enhance the system, ensuring seamless performance and alignment with project goals
